

IGSU launched the new official website - igsu.gov.md

The General Inspectorate for Emergency Situations has launched the new official website [https://igsu.gov.md/](https://igsu.gov.md), created to provide citizens with updated, fast and accessible information, contributing to increasing the transparency of the institution's activity.

The site was created in accordance with Government Decision no. 728 of 26.09.2023, regarding the official websites of public authorities and institutions and the minimum requirements regarding their social media profiles. At the same time, the portal aligned with the recommendations of the State Chancellery regarding the model, created by the Public Institution Information Technology and Cyber Security Service, in collaboration with the Electronic Government Agency.

The official page was developed on the Drupal 10 platform, being created according to modern standards of accessibility and information security, and is compatible with all devices, including mobile phones and tablets. The new site is available in Romanian, English and Russian and is adapted to people with special requirements.

Users can easily access press releases, safety advisories, informational guides and other useful information of public interest.

The new site is an essential tool for direct communication between IGSU and citizens, providing transparency and quick access to all the institution's resources.

IGSU urges citizens and media representatives to follow the official website and periodically consult the available information, in order to be aware of the institution's activity and to follow the recommendations of specialists in order to prevent exceptional and risky situations.
