

Meteorological warning - wind intensifications (yellow code)

According to the State Hydrometeorological Service, on the date of **september 18, 2025**, within the hours of hours **06:00 – 18:00**, on the territory of the country are stipulated **intensifications of the north-western wind** in bursts up to **15–20 m/s** . **(Yellow code)**

in this context, we urge the population to avoid igniting fire on open surfaces, especially around the forest spaces and the housing sector. In strong wind conditions, any source of ignition can generate devastating fires.

Also, people who choose to sanitize their households are asked not to burn the household residues and dry vegetation, as any spark can spread quickly.

At the same time, rescuers warn the citizens to avoid finding under trees and electric pillars, as well as the proximity to the areas where high voltage threads can fall.

The specialists also recommend the re -employment of the vehicles under the trees, in safe places, to prevent the collapse of the trees over them.
